

Harold J Saenz

239-321-2726 | joshu4nick19@gmail.com | github.com/HaroldSaenz87

EDUCATION

University of Central Florida
Bachelor of Science in Computer Science

Orlando, FL
Expected April 2027

TECHNICAL SKILLS

Languages: Java, C, JavaScript, TypeScript, PHP, SQL, HTML/CSS
Frameworks & Libraries: React, React Native, Node.js, Express, Zustand, GSAP, Tailwind
Databases & Tools: MongoDB, MySQL, Git, GitHub, REST APIs, Expo

PROJECTS

BookDrop (Personal Project) | *React Native, Expo, TypeScript, Zustand, Node.js, MongoDB* May 2026

- A cross-platform social discovery app utilizing a Zustand-based state management architecture to synchronize authentication and session persistence.
- Architected an infinite-scrolling community feed with customized cursor-based pagination logic, reducing initial data payload size by 60%.
- Designed a custom synchronization layer using the React Native Animated API to maintain UI fluidity during high-latency API requests.
- Implemented secure JWT-based identity management with encrypted local storage, ensuring consistent user authorization across navigation stacks.

LesChic (Class Project) | *React, TypeScript, GSAP, Tailwind, Node.js, MongoDB* April 2026

- Collaborated with a team of 5 to develop a luxury wardrobe manager, contributing cinematic UI interactions built with GSAP ScrollTriggers and SVG masking.
- Led the implementation of an Optimistic UI update strategy, allowing users to manage large asset libraries with perceived zero-latency via local state reconciliation.
- Implemented a recursive data transformation algorithm to normalize complex color metadata, increasing database query efficiency and filter accuracy.
- Enforced strict TypeScript type-safety across the full stack to eliminate runtime errors associated with null-prop access in shared components.

SeaYourContacts (Class Project) | *JS, PHP, MySQL, CSS* February 2026

- Co-developed a LAMP-stack contact management system in an Agile team environment, utilizing Git for conflict-free version control and feature branching.
- Optimized database interactions by designing normalized SQL schemas, reducing data redundancy while handling concurrent CRUD operations.
- Implemented an asynchronous search engine that filters contacts via local client-side state, significantly reducing unnecessary server pings.
- Collaborated on responsive design principles using CSS Grid and Flexbox, ensuring layout integrity across all mobile and desktop breakpoints.

EXPERIENCE

Amazon Orlando, FL
Logistics & Fulfillment February 2019 – Present

- Applied systematic problem-solving to resolve process bottlenecks in a high-pressure environment, consistently exceeding daily operational targets.
- Demonstrated reliability and teamwork by coordinating with cross-functional logistics teams to maintain inventory integrity.
